Method of investigation

We submitted the investigated plants to a sales simulation, according to the conditions mentioned in the appendix. In the consumer phase we evaluated the plants once a week. The evaluation criteria are based on the evaluation card for the specific product (www.vbn.nl). The most important criteria are the leaf quality (ornamental value foliage, scale 1-5) and when applicable, the number of good flowers. The shelf life ends when there are no good flowers left and/or the ornamental value is poor (score 1). The found average is based on the number of days in the consumer phase. The transport- and the store simulation are not included.

Results

Average longevity(days) > 70,0

Rejection criteria

Day	Phase	Ornamental value foliage	number of good Flowers	number of rejected buds	number of buds	number of stems
0	Consumer simulation	4,0	20,7	0,0	26,7	2,0
70		4,0	29,3		2,0	

The results in the table are the average values of all tested plants.
