## Method of investigation

We submitted the investigated plants to a sales simulation, according to the conditions mentioned in the appendix. In the consumer phase we evaluated the plants once a week. The evaluation criteria are based on the evaluation card for the specific product (www.vbn.nl). The most important criteria are the leaf quality (ornamental value foliage, scale 1-5) and when applicable, the number of good flowers. The shelf life ends when there are no good flowers left and/or the ornamental value is poor (score 1). The found average is based on the number of days in the consumer phase. The transport- and the store simulation are not included.

#### Results

Average longevity(days) 63,0 100 % Percentage reached at day 56 end of Rejection criteria flowering

Number of tested plants

Day	Phase	Ornamental value foliage	number of good Flowers	number of flowers that have ended flowering	number of rejected buds	number of buds	number of stems
0	Consumer simulation	5,0	10,0	0,0	0,0	12,0	2,0
56		4,3	11,3			0,3	
63		4,0	10,3			0,0	

The results in the table are the average values of all tested plants.
